

An anatomical illustration of the human torso, focusing on the abdominal cavity. The liver is prominently displayed in a bright orange color, showing its characteristic lobulated surface and a complex network of branching blood vessels (portal and hepatic veins) in shades of purple and blue. The kidneys are shown in a reddish-brown hue on either side of the spine. The major blood vessels, including the aorta and inferior vena cava, are depicted in red and blue. The background is a dark blue, semi-transparent representation of the human torso, highlighting the internal organs.
